MAX Direct+

MAX LANE MACHINE BY BRUNSWICK

MAX – the new leader in lane machine technology, features Brunswick's Direct+ Conditioning system. Built to deliver superior performance, reliability, and consistency, MAX is very easy and intuitive to operate. MAX is designed to make lane care easy, reliable, and customized for the needs of bowling centers across the world.

The Direct+ injection system provides individual board-by-board application for superior pattern consistency. The pattern application is not dependent upon machine speed or applying oil on the return pass. Complicated patterns can be laid quickly and precisely. That is why the Direct+ technology has been the choice of the PBA for the past 12 years.

USER INTERFACE

MAX features a 10.4" Android-based touch screen tablet that is easy and intuitive to use. This is the same functional and durable tablet used in Brunswick's SYNC™ scoring and management system. The tablet features a large screen with easy-to-navigate main menus across the top and sub menus on the left.

The tablet is also WiFi enabled, allowing for direct Internet communication between Brunswick and the lane machine. This will enhance and quicken any needed support and technical assistance. Pattern download times are also greatly improved.

Predictive analytics are included in the software allowing the user to quickly check specific parameters to ensure the machine is functioning at maximum performance and efficiency.

CLEANING SYSTEM

The cleaning squeegee has been engineered with ease of adjustment as a key feature. This ensures the appropriate amount of contact with the lane resulting in superior lane cleaning.

A cleaner pressure sensor monitors the cleaning pressure and generates an error message if the pressure becomes too high or too low, allowing for a quick and easy fix.

CONTAMINATION SENSOR

Patent Pending

MAX features a patent-pending sensor system that alerts the user when cleaner has entered the conditioner tank. Once cleaner is introduced into the machine's system, a complete system purge is required. This sensor won't allow the cleaner to leave the conditioning tank by automatically shutting down the machine and providing an error message. The conditioner tank can then be cleaned without adversely affecting other components in the conditioning system.

DIRECT+ CONDITIONING

Patent numbers 7,014,714 and 7,611,583

MAX features our patented Direct+ Conditioning system, which applies the oil with 39 individual injectors – one for each board. This board-by-board approach ensures precise delivery onto the lane, exactly where you want it, regardless of topography. The result is superior pattern consistency with no zigzags or multi-component transfer systems to blur the results.

With Direct+ Conditioning you know the right amount of oil is on the lane. Oil application is computer controlled by varying the injector pulse rate, not the speed of the machine.

The on-board heater warms the conditioner to 80°F ensuring consistent application, while the buffer brush tapers for smoother transitions.

The PBA® counts on Direct+ Conditioning to provide consistent patterns for the very stringent requirements of the PBA Tour. The Direct+ Conditioning system has been used for every PBA Tour event since 2006.

PATTERN MANAGER SOFTWARE

The Brunswick Pattern Manager is a program developed specifically for Direct+ Technology users. It allows you to easily manage your patterns and download them to your lane machine. Included in the Pattern Manager is the Pattern Editor which allows you to create new or edit existing patterns. The log files enable you to see how the lane machine is being used each day. Patterns can be downloaded from the Brunswick Pattern Library to your PC for use in your Brunswick MAX lane machine.

FLEX POWER

MAX can be quickly switched between Lithium battery or AC/DC Power. Equipped with an on-board power supply, plugging in the power cord for a seamless transition between these options. The Lithium battery uses a smart charger to optimize battery life and performance. The charging cycle and battery use are monitored and logged through the User Interface. A buzzer will alert you if the machine is not charging after use. If the unexpected happens and the battery was not charged, your machine can be ready to go with the back-up power cord.

WARRANTY

MAX comes standard with a two-year warranty. A warranty extension of one year is available.
